

Web Development

I have always had a sustained interest in pursuing a career which is computer and web applications development based. It was because of this interest that I chose to study full stack web as one of my A levels.

Web applications are very useful in the modern world, especially in Business and spending time or Learning. I therefore chose these rigorous subjects as my other A levels and saw how computers are useful in each of these.

I enjoy web development because I find the project work to be very interesting and challenging.

It helps me to broaden my view about the world around me, whereas learning programming in Holberton school I have gained knowledge of how frontend and backend and database works at the

same time. I'm sure all my A levels would be useful for me on my course at university and in my career in the world of web development.

I carried out some work experience at D_TECH which was found very worthwhile. It involved going to different departments and I was able to see how modern technology works, blockchain and internet of things (IoT). I also talked to many developers and saw the importance of teamwork to achieve success.

I have been actively involved in many other aspects of school life. The section "speaker of the day" made by Holberton school was the best experience there. This not only involved having the confidence to speak in front of others and inform them of accurate information, it also gave me a great sense of responsibility.

I'm sure any career in the web development field would require you to be responsible to work on your own and possibly could require you to be confident.

There are many activities which I pursue outside of school. These include playing crossfit with my friends. I often find myself competing with my friends and see it as a challenge to play against them.

I also play football which requires much teamwork and this is the best part of the game.

Alongside this I take a great interest in my society and culture. I have been part of many volunteering

societies where I have learnt more about humanity, also helped organize several different events.

I created many websites which I very much enjoyed doing. I'm sure I have the skills and knowledge to pursue any computer based career and I am very confident I will enjoy it I wish to participate in social, cultural and sporting events.
